

# MOSAIC™

## PREPARING YOUR ARTWORK FOR THE MOSAIC SIGN PANELS

Please utilize the template provided and ensure the artwork is placed within the suggested guidelines.

These templates are intended to assist in the artwork creation process and should be utilized as a background layer to help understand which areas of the signage may get covered when inserted into the bin.

Before saving the artwork for print in PDF format, make sure that the template layer is either deleted or turned off so that the guidelines are not visible.

## GENERAL GUIDELINES FOR ANY SOFTWARE

Artwork must be created using CMYK or Pantone Spot colors. Documents created in RGB mode will require color conversion to avoid having the colors print improperly. This may result in unpredictable results, and may alter the desired color.

Ensure that the artwork has been placed within the guidelines set in the templates supplied. The cyan outline in the template is the suggested "content safe area". Ensure that the crop marks are visible when saving the file as a PDF.

All text must be converted to outlines before saving the document as a PDF. All images must be embedded or supplied with the PDF. Images must have a resolution of 100 DPI minimum and/or 300 DPI maximum. This will ensure that the desired images will display properly when printed.

The final artwork must be saved as a PDF. Alternatively an EPS or AI file will be accepted as long as the requirements listed above have been met.
